

INDUSTRIAL

ALL YOUR RELEASE PAPER
NEEDS IN ONE PLACE

Our AQULIX process liners are designed with the kind of expert knowledge only gained from years of experience in the photographic industry. We built these liners to cater specifically to all your product needs. Whether it's textiles and traffic control, artificial leather and breathable membranes or electronic applications, we have the carefully crafted product specifically for you.

KEY APPLICATIONS:

- Artificial leather
- Breathable membranes
- Electronic parts
- Reflective products

In addition to the highest quality on the market, all AQULIX materials are individually designed with our toolbox approach, where the requested layers can be put together to precisely match the requirements of your desired paper. In fact, we even produce the raw paper ourselves – an added value only Felix Schoeller Release can offer.

KEY BENEFITS YOU CAN COUNT ON

STABLE RELEASE LEVEL

With our AQULIX products, you are promised an increase in productivity and a decrease in scrap as a result of constant release when using multiple applications. Our papers also have a uniform surface quality which leaves no uncoated spots. And most importantly, the release value of all AQULIX products is stable due to our unique polymer coating – a feature exclusive to AQULIX by Felix Schoeller Release.

UNIQUE SURFACE

The extremely high quality of our products ensures a matt soft-touch surface. Depending on your individual needs, we offer various gloss grades and surfaces.

EXCLUSIVE POLYMER COATING

Completely new to the market is our polymer soft-touch coating with different highly temperature-resistant coatings available. Our products are generally suitable for embossing processes.
